Tinactin
Powder Spray

FORMULA:
Tinactine Powder Spray contains 1% Tolnaftate as an active ingredient. Other substances are propellant gas A-31, alcohol, talc, Ucon-50 HB-660, Butyl hydroxytoluen (0.0086 mg).

PHARMACOLOGICAL PROPERTIES
Pharmacodynamic properties:
Tolnaftate is a topically used antifungal agent. Tolnaftate is effective on dermatophytes. Tolnaftate has specific and significant fungicidal effect on Tricophytone, Microsporum and Epidermophytone. It also exerts fungicidal effect against T.mentagrophytes at a concentration of 0.08 g/ml. While it relieves discomfort such as itching and burning derived from tinea pedis, tinea cruris and tinea corporis, it also effectively eliminates fungal symptoms. Thus physical properties such as odorless, colorless and easy solubility in water and organic solvents enable this product to be applied by topical route easily.

Pharmacokinetic properties
Topically applied Tolnaftate’s systemic absorption is not possible through skin.

INDICATIONS
It is indicated for the treatment of Tinea pedis, tinea kruris and tinea korporis.

CONTRAINDICATIONS
Tinactin is contraindicated in people who have hypersensitivity to any substance. In case of known hypersensitivity to any of its ingredients usage of Tinactin is contraindicated.

WARNING/PRECAUTIONS
Unless otherwise recommended by physician, it should not be administered to children below 2 years of age. It is only for external usage. Avoid contact with eyes. If irritation occurs, consult your doctor. While smoking cigarettes, do not spray and don’t place or use it near flame and heat sources. Tube ingredients are under pressure. Don’t puncture or incinerate container. Store below 25 °C at room temperature. Protect from sun lights. Don’t puncture the container even if it’s empty and don’t throw it to flame. Deliberate inhalation or swallow of tube contents may be harmful or fatal. While using, hold it in upright position.

Uses in pregnant women and nursing mother
Category of pregnancy: C
There are no controlled clinical trials conducted with tolnaftate in pregnancy and lactation. In experimental studies, in has been proven that topical Tolnaftate doesn’t have teratogenic and mutagenic effects. Since results of experimental studies always cannot be shown or confirmed in humans tolnaftate is not advised to be used in these periods. Its usage is possible only with doctors careful evaluation based upon the assessment of benefits/risks ratio.

SIDE EFFECTS/ADVERSE EFFECTS
Non significant-slight irritation, erythema and pruritus have been observed in some clinical studies. However, any side effect which may be attributed to tolnaftate has not been reported. Since Tolnaftate doesn’t have systemic absorption after topical application, any systemic side effect hasn’t been declared.

WHEN YOU NOTICE UNEXPECTED EFFECTS CONSULT YOUR DOCTOR

DRUG INTERACTIONS
There is no known incompatibility with any other product.

DOSAGE AND METHOD OF ADMINISTRATION
It is recommended to be used under following conditions, unless, recommended by doctors otherwise: Wash and dry the effected skin region. Before use shake well the product. Spray the product as it will cover affected area in a thin layer. If not differently recommended by doctor apply the product at least twice daily. For children’s proper use, parent’s supervision is recommended.

To get successful results during tinea pedis treatment, some measures are necessary:
- Appropriate shoes should be worn; shoes that facilitate air circulation and keep areas between fingers dry.
- Socks should be changed at least once daily
- Shoes should also be changed alternately.

Treatment should last at least 4 weeks.
In case of spraying mechanism get plugged, you can reopen spraying hole with a needle.

OVERDOSE
There is no overdose information reported.
